

Want to hear about an exciting and promising new development in Hartland?

Leigh Harter Speech Services is now **Hartland's first** Independent hyperbaric oxygen therapy provider!

Hyperbaric oxygen therapy (HBOT) is a valuable medical treatment that can offer various benefits to patients with a wide range of conditions. HBOT involves breathing pure oxygen in a pressurized chamber, which increases the amount of oxygen delivered to the body's tissues. This high level of oxygen can aid in the healing process and support the body's natural repair and healing mechanisms.

Some of the conditions and injuries that HBOT has been used to treat include **sports injuries, crush injuries, brain injuries, burns, surgeries, skin grafts, sudden deafness, sudden vision loss, necrotizing fasciitis, radiation damage from radiation therapy, diabetically derived illnesses, severe anemia and much more.**

While HBOT can be beneficial for many conditions, it may not be suitable for everyone, and individual cases should be assessed by medical professionals to determine if HBOT is a suitable option for your situation.

With HBOT, Leigh Harter Speech Services hopes to bring significant relief and improved outcomes for patients with various medical conditions, enhancing the overall healthcare opportunities of our community.
